CRI CERTIFIED

LEVER-FREE ON/OFF SWITCH
Continuous hands-free power

SPRAY SWITCH
Easy touch control

FATIGUE-FREE VERTICAL HANDLES
Ergonomic design for comfortable cleaning & increased productivity

QUICK-CONNECT POWER CORD
Easy to remove & attach power cord (Indicator light 230V only)

HOUR METER
Tracks run time

QUICK-CHANGE SOLUTION TANK
Holds 11.4 L capacity saving time & labour

CLEAR COAT PROTECTION
High-gloss finish for improved long-term durability

PUMP
90 PSI / 6.2 BAR

FOLD DOWN HANDLE
For compact storage design

MOTOR
1HP, 1400W, 6-11amp
100-240V, 50/60Hz - AC
Orbital 1725 RPM +
Rotational 80 RPM, 59 dB

FLOW CONTROL VALVE
Adjusts solution volume

TRANSPORT WHEELS - 25cm
Chemical-resistant & non-marking

ADJUSTABLE SPRAY JETS
Low moisture spray reduces water, chemical and labour

QUICK-FLIP BASE WITH STAND
Compact storage & quick pad changing

VELCRO DRIVER PLATE
Change out velcro replacement plate easily

WEIGHT PLATE
Increased head pressure for maximum cleaning performance

LIFT HANDLE
Provides easy lifting & lowering of base

FREE FLOATING 17" BASE
Provides 100% contact on floors

Specifications

BASE DIAMETER 43.18cm | **MOTOR** 1HP, 1400W 100-240V / 50-60Hz, AC | **DUAL SPEED** Orbital 1725 RPM + Rotational 80 RPM

ORBOT

The ORBOT Method uses 95% less water than traditional carpet cleaning methods

ORBOT's dual-action technology ORBOT's unique low-moisture system uses 10 times less the amount of water opposed to other water extraction methods. The power mopping ability of SuperZorb pads means over-wet carpets that harvest mold and mildew will never be an issue. And the agitating ability of AgiClean pads remove soil seep down and eliminates stains and bacteria growth. With drying times reduced exponentially, cleaned areas can be reopened to foot traffic sooner and customer spaces can be accessible earlier. The ORBOT method is gentle on fibers which significantly preserves the life of the carpet.

TRADITIONAL METHOD

Standard carpet cleaning methods create problems

- Substandard results
- Mold and bacteria growth
- Slip and fall accidents
- Damages carpet fibers
- Poor indoor air quality
- Carpet wrinkles
- Voided carpet warranties
- Wet carpets
- Reduced carpet life
- Long dry times
- Recurring stains
- Color fading

ORBOT METHOD

ORBOT carpet cleaning methods solve problems

The ORBOT method eliminates all traditional method problems. Our patented vibration extraction technology provides the safest, fastest and most efficient type of deep cleaning available.

Use these 17 inch accessories for "Wow Factor" results on carpet

The ORBOT Method cleans fast and effectively

The development of dark, nasty mildew found in grout lines in wet environments is inevitable. Traditionally, small specialty grout brushes are used to clean these surfaces. Unfortunately, porous tile and filthy grout lines are notoriously difficult and tedious to clean once dirt has settled into grout lines or tiny crevices of tile.

The ORBOT Method achieves unparalleled cleaning results on tile and grout by combining our machines patented technology with our multi-surface brush. The secret behind our brush system and its unique design is the bristles varying lengths and diameters. The short, thicker bristles clean top surfaces, while the medium length bristles reach into stubborn crevices and pores. The longer, angled bristles located around the outer edge of the brush are specifically developed to clean hard to reach areas such as along edges and around obstacles. This system negates the use of excessive water and harsh chemicals.

TRADITIONAL METHOD

Standard tile & grout cleaning methods create problems

- Grout lines along edges of walls cannot be reached
- Multiple passes required to penetrate grout lines
- Crevices, cracks and pores are difficult to clean
- Harsh chemicals required to achieve results
- Brush bristles do not reach deep grout lines
- Labor intensive

ORBOT METHOD

ORBOT tile & grout cleaning methods solve problems

The ORBOT method achieves unparalleled cleaning results by combining our technology with our multi-surface brush. The secret behind our brush design is the varying bristle length and diameters.

The short, thicker bristles clean top surfaces, while the medium length bristles reach stubborn crevices, grout lines and pores. The longer bristles are specifically developed to clean hard to reach areas. This system also reduces the need for excessive water and harsh chemicals.

The ORBOT Method uses no harsh chemicals

Concrete is a very malleable yet durable material for both interior and exterior flooring surfaces. It is also very porous so it must be cleaned regularly to prevent mold and dirt buildup. Traditionally, concrete is cleaned with harsh chemicals or by pressure washing. With excessive water pressure, the resulting momentum is great enough to dislodge not only dirt and debris but can cause spalling such as peels, flakes and popouts.

The ORBOT Method combines our dual action orbital machines with a weight kit and our specialized concrete brush to remove heavy soil from porous concrete. The mechanical action of the ORBOT allows the concrete brush to work more effectively with less water. The hardened bristles of our concrete brush are tough enough to agitate hard surfaces without damaging it, and without the haphazards of extreme water pressure.

TRADITIONAL METHOD

Standard concrete cleaning methods create problems

- Cleaning without excessive chemicals & water
- Greasy & slippery floors
- Mineral deposits
- Mold growth

ORBOT METHOD

ORBOT concrete cleaning methods solve problems

The ORBOT method provides an environmentally preferred form of removing soil & grease with minimal water & chemical use. When combining ORBOT's patented orbital technology with our concrete brushes & pads, the hard to reach pores, cracks & crevices are easily cleaned and maintained.

The ORBOT Method achieves complete floor restoration and reconditioning

Traditionally, refinishing and resurfacing stone involves the use of harsh chemicals to increase reflective properties of the stone. However, the chemical method cannot remove scratches or lippage and if used improperly or for extended periods of time, stone quality can diminish. Another method for stone refinishing, which focuses on using coatings, adds even more maintenance and eventually loses its effectiveness, requiring the stripping of these coatings.

The ORBOT 'StoneFlash Pad' Method is part of a 5-step chemical-free system for grinding, honing and polishing marble, terrazzo, travertine, limestone and more. Our 5-step complete restoration kit includes pads of various grit, allowing for a more precise execution of floor refinishing without the use of harsh chemicals. For light retouching, we also offer our maintenance package, which is steps 3-5 of the complete kit, perfect light scratches or simply the need for a gloss boost.

TRADITIONAL METHOD

Standard stone cleaning methods create problems

- Consistency
- Long lasting shine
- Labor intensive
- Orange peel effect
- Wavy reflections
- Messy cleanups
- Etching damage
- Extensive professional training
- Calcium deficient stone

ORBOT METHOD

ORBOT stone cleaning methods solve problems

The StoneFlash Pad system allows any operator to achieve superior results without the use of chemicals, polishing compounds and steel wool pads. This user friendly system allows unskilled operators the ability to grind, hone and polish like a true professional.

Achieve consistent color, depth and factory finish results on marble, limestone, travertine and terrazzo.

Instructions for restoration

- Install weight kit onto ORBOT machine (LiFE, SprayBorg & Vibe, not necessary on the SLiM machine).
- Fill bottle cartridge with water.
- Add appropriate pad.
- Move the machine forward and back, making at least 5 passes forward and 5 passes backwards, at 1 foot per second.
Tip: Overlap passes to avoid missing areas on the floor.
- Repeat the forward and back motion for all steps 1-5.
Tip: The more passes made with steps 1-2, the better the results will be in the end when polishing with steps 4-5.
- Always rinse the floors and vacuum between steps. Debris left behind from previous steps will result in scratching and a lower grade of gloss finish.

STEP 1 Pad - Removal of deep scratches and to resurface the stone flooring. Step 1 is the most important step to achieve the best results. Step 1 will grind the floor down and allow for steps 2-5 to achieve a high gloss result.

STEP 2 Pad - Removal of medium scratches.

STEP 3 Pad - Honing step, prepares floor to achieve a glossy finish.

STEP 4-5 Pads - Polishing pads. Customers can choose which gloss level is satisfactory by finishing after step 4 or 5.

Tip: Step 5 will produce the highest gloss, color depth, and clarity, and is used for daily maintenance.

The ORBOT Method achieves complete floor restoration and reconditioning

Microporous flooring can be difficult to clean by traditional means. Deeply penetrated dirt and grease in specialized ceramic, composite and porcelain flooring can be problematic.

The ORBOT method is one of the only systems that can actually pull the dirt from porous floors. Using our specialized open-cell UltraLift pad, the orbital drive motion of our ORBOT machines when combined with the UltraLift pad create a suction effect. Easily lift away grease and dirt while simultaneously scrubbing away surface stains and stubborn black marks, with the majority of situations only requiring the use of water. UltraLift pad can be used on vinyl, linoleum, stone, ceramic, porcelain, wood, smooth concrete and any other types of smooth surface.

TRADITIONAL METHOD

Microporous flooring can be problematic

Dirt & grease can deeply penetrate specialized hard floors making it quite difficult to lift.

- Ceramic tile
- Epoxy
- Composite
- Porcelain

ORBOT METHOD

The ORBOT system actually lifts dirt from porous floors

Our orbital drive machines combined with our specialized UltraLift pad creates a suction effect simultaneously scrubbing surface stains and stubborn black marks mainly requiring only water.
